

Portfolio Risk Guidelines

Concentration risk. Sector, issuer and counterparty concentration limits are defined in the IPS and enforced by the limit-breach register.

Liquidity risk. Private equity and fund holdings are illiquid; valuations are periodic. Maintain sufficient liquid listed assets to meet capital calls.

Currency risk. Multi-currency portfolios convert to base currency using the `currency_rates` reference; monitor unhedged foreign-currency exposure.

Data quality. Exposure and breach reporting depend on complete holdings and prices; missing prices or stale feeds must be flagged before sign-off.
